Reflection Questions

1. Did your estimations reflect the actual effort?

Yes. The story point estimates gave a reasonable indication of the effort required. Sprint 1 contained 26 story points and the selected work was completed during the simulated sprint.

2. Was your backlog well-prioritized?

Yes. The high-priority requirements were placed ahead of the medium-priority requirement, which helped select the most important work for Sprint 1.

3. How did your simulated sprint align with your plan?

The sprint followed the plan by selecting four stories, then moving them from To Do to In Progress and finally to Done. The sprint was completed successfully.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the planned work being completed during the sprint. It indicated that the team could complete the selected 26 story points within the simulated sprint.
